

Testimonies

Gary, from MO

I've had a spot on my right shoulder since Viet Nam that has never healed. It's been over 40 years! I put Sniper Gel on it and took a plastic teaspoon of the Sniper liquid in the mornings and evenings. I couldn't believe it! In less than a week it was healed up! This product works! Don't live without it!

Alicia, from MO

As I was cooking, boiling water splattered on me. I didn't have any Sniper that night, but put it on my burns the next day. The two spots that were painful and close to blistering were almost gone when I woke up the following morning!

Plus, my hands have never been so soft without constantly having to apply hand lotion.

Jerry, from MI

At 73 years of age, last month after having my first bout of Chemo-therapy for Leukemia, I developed a Staph infection just above my eye. While in the ER for that, I had a heart attack. I was admitted to the Cardio floor. My white blood cell count was so high, it was literally off the charts! I developed pneumonia, and had an enlarged kidney that was pressing against my stomach which kept me from eating. The Staph then caused a secondary bacterial infection. At one point during my stay, I had 7 different tubes of medication, or another running through my veins.

With all that was going on, the Doctor's were amazed at my quick recovery. They couldn't believe how fast the Staph had dried up, nor how quickly I had overcome the pneumonia.

What they DIDN'T know was that my Adult children were giving me Sniper liquid (2 teaspoons in the AM and 2 in the PM), and rubbing Sniper gel several times a day on the Staph infection, my back and my chest! I'm thankful to say that I'm healthy, feeling great and my white blood cell count is normal!

June, from MO

I woke up with horrible watery nose syndrome, for which I usually take a Benadryl-type drug. Instead, I dipped a Q-tip in the liquid Sniper and gently swabbed my nose. Within minutes the allergy/cold symptoms were gone and I felt great all day!

Kelsie, from MO

My wife stepped on a nail. For two days in a row I applied Sniper gel to her foot. On the third day, we couldn't even tell which foot the sore had been on! I was truly amazed! Of course, she followed with a Tetanus shot just to be safe.

Debbie, from MO

My husband had a massive stroke 9 years ago. 7 years ago he developed bed sores on the outside of both ankles. We had a nurse come in twice a week for about a month. She was able to help the sore on his "good" side, but the paralyzed side just wouldn't heal.

After applying Sniper Gel, we've seen amazing results! The wound was a little larger than the size of a quarter, now it is the size of a dime, which means it's closing up. When dressing is removed it's almost clear, which was never the case before.

We are very blessed to be a part of this wonderful company, and for Sniper! Silver Mania is changing our lives!

Pam, from MO

My job requires me to be on my feet all day long. I've had Plantar Fasciitis in both feet for over 2 years now. I've tried everything the Dr has told me to, and other things as well. Nothing has worked - until I tried Sniper. My friend Shirley had me put Sniper Gel on my foot. After a minute or so, it didn't hurt!

I was supposed to have surgery this month - but now I don't have to! I put Sniper Gel on each morning and evening, and I can't believe the difference - neither can my husband! I'm back to doing alot of the things I never thought I'd be able to do again - like playing with my children and walking without pain! All this, and I've only been using Sniper for a week!

Dan, from OH

I have been giving my dog ½ teaspoon per day of the Sniper liquid for 5 days and he is now so full of energy, he's wearing me out! He is 7 years old and would play now and then - now he wants to play all the time.

Give your pet Sniper so he/she can be reinvigorated!

Shirley, from MO

When things aren't going smoothly in my life, as they weren't before Christmas - my nerves become frayed and I get hives. The main problem with hives is that I sit on them and they drive me crazy!

After using Sniper Gel on the hives twice a day for 5 days - they were gone! As a plus, my nerves were better, too!

I want the world to know how wonderful Sniper is!

Mary, from FL

I have gum disease. Since I began brushing my teeth with the Sniper Gel after first using regular toothpaste, I've noticed that not only do my teeth feel clean ALL day long (which was never the case before), but my gums are getting better! I love Sniper!

Deb, from MO

I got bit by a spider, which caused a raised welt half way around my ankle. When I took off my sock, is when I noticed it. The second I touched it, it started itching and burning really bad. I ran and got my Sniper Gel and put just a little bit on the raised bumpy welt.

The welt instantly stopped burning and itching! After 8 hrs, it started itching and burning again. I took off the bandage off and the welt was gone! Left, was only a red strip half the size. I applied Sniper again, and instantly the burning and itching stopped. Sniper is great Stuff!

John, from MO

I have arthritis in both hands. In the mornings, I can barely move my fingers. After applying Sniper twice a day for the last 3 or 4 days, I can now move my fingers and even make a fist first thing in the morning! What a difference this has made for me!

Ken, from KS

At 10 years old, I had a dart go through my right eye resulting in a torn iris and a damaged cornea. I had surgery to try to repair this injury. For years, I have had an underlying infection in my eye, along with scar tissue. Also resulting from the severity of this injury, I developed a cataract, my eye has been sensitive to light, and I've experienced frequent headaches.

I began taking the Sniper liquid internally on December 12, 2009, and began putting the Sniper gel on, and around the eye. I had soothing relief. I decided to also spray the Sniper liquid in my eye to see what might happen. By mid-January, I can tell you that the cataract is almost gone! My eye feels better, and my vision has improved!

Thank you for making this wonderful product available to all of us!

Malinda, from Kansas

I had a bite on my leg. I'd put Sniper on it a couple of times, but decided that I should go to the doctor after 6 days. The bite was a Brown Recluse Spider Bite!! I checked the internet to see what a "normal" bite reaction is and I should have had a huge hole in my leg. The doctor put me on steroids, and I continued to put Sniper on it. The bite area is almost clear and I have not lost any flesh. The doctor was sure that I'd have a hole in my leg!

Randy, from Kansas

I had a knee replacement in January. The scar is 1 month old now. The Physical Therapist and Doctor can't believe how good this 14" scar looks. There were 49 staples in my knee. When the staples came out, it looked like I was going to have several areas that would not heal together and it looked like my skin would definitely die. However, we put Sniper on it and, in one treatment, that flesh sealed together!! Also, on day 4, we saw that part of the wound had some infection in it, so we put Sniper on it. We haven't had any concerns since. The Doctor bought a gel from us at my 2 week follow-up!
