

Sniper, with SilverSol Technology

- Kills all pathogenic bacteria it comes in contact with, thus disallowing the development of resistant strains
- Unlike broad spectrum antibiotics, it does not kill friendly bacteria such as *Lactobacillus*, leaving no side effects from interference with friendly bacteria
- Inactivates viruses at the DNA/RNA level through magnetic resonance, thus preventing virus replication
- Does not interact with pharmaceuticals; in fact, has been found to work synergistically with medications
- Enhances the immune system
- Is completely safe and non-toxic according to numerous safety studies

In addition to anti-bacterial uses, applications of Sniper include:

- Hospital disinfectant (EPA approved)
- Inhibition of the growth of yeast
- Water treatment
- Successful treatment of malaria and many other human ailments
- Burn and wound treatment
- Homeland defense
